

OILFIELD EQUIPMENT: PLANNED VISIT - INSPECTION - RECERTIFICATION

Your equipment is checked in accordance with the manufacturer's or your own requirements:

- Installation / Removal
- Visual examination
- Dismantling & assessment
- Repairs
- Renovation
- Modifications

- We inspect the following equipment:

- Swivel joints
- Ball Valves / Plug Valves
- High Pressure piping
- Test Separators
- Wire Line lubricators / BOP's
- Filtration units
- Manifolds of all types

- We provide you with:

- Spare parts
- Planned visits
- End-user staff training
- An equipment follow up if required

- We offer you:

- The know how of our technical teams
- A complete range of gauges / 'suitcase' kits for wear checks and thread compatibility checking by yourselves

- The efficiency and reactivity of our team
- Procedures approved by BUREAU VERITAS

Our following is our process mode:

- All HP equipment is inspected in accordance with manufacturer's specifications or your own requirements
- A visual examination is made to classify the equipment
- A complete inventory of "out of service" equipment is established
- The equipment is completely dismantled and inspected
- A quote for complete recertification is sent to you in accordance with our check-up report
- At receipt of your order, we proceed with work as follows:
 - Thickness measurements
 - Pressure test (water)
 - Painting: in accordance with your specifications
 - A final report is sent to you after recertification, including:
 - Operational certificates
 - Pictures
 - Pressure test charts and reports
 - Our conclusions or advice concerning your equipment

F.C.E can accommodate all your requirements for inspection of temporary equipment, such as:

Separator, SAS, BOP, etc...
